EDUCATION

University of Cincinnati, Carl H. Lindner College of Business <i>Master of Science in Information Systems (Graduate Certificate: Data Analytics)</i>	Cincinnati, OH <i>Expected Nov 2027</i>
The Ohio State University, Max M. Fisher College of Business <i>Bachelor of Science in Business Administration in Accounting GPA: 3.69 / 4.0</i>	Columbus, OH <i>Aug 2026</i>
Honors: Magna Cum Laude, Dean's List, Fisher College of Business Scholar	

TECHNICAL SKILLS

Data & Financial Analysis: SQL (MySQL, PostgreSQL, DuckDB), Python (pandas, NumPy, Scikit-learn), R, Advanced Excel (Macros/VBA, Financial Modeling), Salesforce CRM, AI-Assisted Development (Claude Code, Antigravity)

Data Visualization & BI: Power BI (DAX), Tableau, Google Looker (LookML), Plotly, Interactive HTML/JS Dashboards

Analytics & Finance Methods: OLS and Difference-in-Differences Regression, A/B Testing & Experiment Design, Hypothesis Testing, Time-Series Forecasting, K-Means Clustering, Revenue Cycle & Cost Reconciliation, Gross Margin & Pricing Strategy, DuPont ROE Analysis, Scenario & Sensitivity Analysis

WORK EXPERIENCE

IterLight Lab <i>Product & Financial Analyst, Internship</i>	Remote <i>Mar 2026 – Jun 2026</i>
- Analyzed unit economics and fulfillment cost structures across 500,000 transaction records using Python and DuckDB, identifying a \$4.24 million monthly gross margin deficit caused by misaligned product scoring and pricing rules. - Directed AI coding agents (Claude Code) to rebuild a shipping cost model on 93 pre-shipment features in Scikit-learn after its inherited predicted cost matched actuals at $r = 0.9999$, impossible before delivery, then traced a \$55 under-estimate on cross-country routes inflating those items' scores by \$8.25 each. - Engineered executive Power BI dashboards and designed a controlled pilot test framework, shutting down margin-destructive promotional variants to protect \$977,000 in monthly recurring revenue while delivering a \$7.5 million annual margin recovery roadmap to the Board. - Isolated external supply chain bottlenecks across 43,500 orders using Difference-in-Differences regression models, establishing clean profitability benchmarks ranging from $-\\$1.54$ to $+\\$0.63$ per impression for leadership evaluation.	
Global Career Accelerator <i>Data & Applied Analytics Trainee</i>	Remote <i>Jun 2025 – Aug 2025</i>
- Queried 600,000+ enterprise hardware asset records for Intel Corporation using SQL pipelines (multi-table JOINS, window functions, nested subqueries), segmenting device lifecycle cohorts across global regions to support sustainability and cost-reduction initiatives. - Investigated digital engagement metrics and web session logs for The Recording Academy using Python (pandas, Plotly), diagnosing post-split audience drop-offs to recommend cross-domain content reallocations that boosted user retention.	
The Ohio State University Wexner Medical Center <i>Finance Assistant, Department of Radiology</i>	Columbus, OH <i>Jun 2024 – May 2025</i>
- Audited HRIS position allocations for 100+ clinical and administrative radiology staff, reconciling payroll ledgers with active operational roles to eliminate ghost positions and secure \$40,000+ in annual cost savings. - Implemented an automated Excel reconciliation tool using VLOOKUPs and Pivot Tables across 3 financial ledgers, recovering \$9,000+ in outstanding employee travel and clinical supply reimbursements. - Monitored monthly invoices from 50+ hospital vendor contracts managing \$300,000+ in annual departmental spend, detecting unit price drift and quantity discrepancies while delivering monthly budget variance reports to executive leadership.	

PROJECTS

VCC Think-A-Thon (Spotify) <i>Lead Quantitative Analyst, 2nd Place</i>	Aug 2026
- Constructed a 32-quarter financial database directly from Spotify SEC filings (Form 20-F and 6-K), isolating subscriber churn from conversion flow to prove a 63% drop in quarterly conversion rates. - Built a persuadability segmentation and bottom-up financial model projecting €4.7 million in net Year 1 benefit at 46.9% return on investment and a 6.7-month payback, with scale gated on 1.33pp of measured lift against a randomized holdout.	
Mastercard Contactless Payment Market Expansion Strategy <i>Solo Business Analyst</i>	May 2026
- Examined 8 years of Federal Reserve card payment data and industry benchmarks in Python, evaluating the 50-point domestic versus global contactless adoption gap and proving merchant visit frequency drives tap-to-pay conversion. - Created a weighted scoring model and scenario analysis across 9 merchant sectors, identifying top priority targets representing 3.91 billion incremental annual transactions and \$5.9 billion+ in potential network revenue expansion.	
Walmart Retail Merchandising & Promotional Strategy <i>Diagnostic Analytics Lead</i>	Apr 2026
- Assessed weekly sales performance across 421,000 store records using regression models, discovering a 7.8% holiday sales lift in large store formats that was absent in small store formats, while proving 3 of 5 promotional campaigns generated zero return. - Simulated budget-neutral promotional reallocations in Excel, projecting a \$48,799 weekly sales increase per store (+4.66% against baseline) by redirecting spend from underperforming markdown campaigns into proven promotional levers.
